

Viminaria juncea
Swish Bush, Golden
Spray; Shrub
Fabaceae

This is a common tall, slender roadside shrub, but on the coast it looks quite different. Due to the relentless winds and salt spray it grows close to the ground on granite outcrops, with thick, densely branching stems.

Nov – Jan ■

Bossiaea linophylla
Shrub
Fabaceae

This is the tallest of our *Bossiaea* species with a weeping habit, long narrow linear leaves, and a profusion of flowers in spring. Common in Jarrah-Marri forest and peppermint woodland

Jul – Nov ■

Bossiaea disticha
Shrub
Fabaceae

Medium shrub, and one of the main understory plants in our karri forest and peppermint woodland. It has a very restricted range, however, being found only from Ellensbrook south to Augusta and generally west of Caves Road. Within these limits though, it is abundant, and a springtime delight along the Track. Its leaves are short and flowers are a little larger than those of *B. linophylla* (above).

Aug – Oct ■

Bossiaea ornata
Broad-leaved Brown Pea;

Shrub

Fabaceae

Low, open shrub with dark, ovate leaves and attractive yellow-brown flowers that are larger than those of the other *Bossiaea* species found here. Grows in sandy woodland.

Sep – Nov ■

Eutaxia virgata

Shrub

Fabaceae

Prostrate or low, twiggly shrub growing in damp areas and peaty swamps. Look for it as you cross the little bridge on the Moses Rock section of the Track.

Nov – Jan

Pimelea suaveolens

Scented Banjine; Shrub

Thymelaeaceae

Delicate low shrub with large, nodding flower heads that seem almost too big to be supported by their stems. It grows on gravelly, lateritic soils in open Jarrah forest between Jurien Bay and Albany.

Sep – Oct
